 **Are you ready to use your
GPS for more than just flight navigation?**

AOPA Air Safety Foundation Presents
GPS FROM THE GROUND UP

Thursday, May 21, 2009

7:00-9:00 PM

Southern NH University

Robert Frost Hall: Walker Auditorium

2500 N. River Road

Manchester, NH

These days, most pilots navigate with a GPS. But if all you're doing is punching "direct" and following the magenta line, you're only scratching the surface of what GPS technology has to offer.

You are cordially invited to attend this free seminar brought to you by the most trusted name in general aviation. No RSVP or registration required, and attendance qualifies toward the AOPA Accident Forgiveness Program and the FAA Wings Program.

The seminar includes:

- An overview of how GPS technology has evolved
- Advice for integrating GPS into every phase of flight
- An explanation of RAIM and how to check for RAIM availability
- Answers to frequently asked questions about WAAS
- Tips for using GPS during missed approach
- How to get more out of your GPS
